

**IN THE SPECIFICATION**

Please amend paragraph [0037] as follows:

[0037] Referring to Figures 2-4, it can also be seen that the scraper blade 20 need not be completely covered by the sheath 70 material. The only sheathing needed for the blade is that necessary to provide the softer scraper blade edges 40. This saves on material costs. It also allows for an esthetically pleasing design because the core 50 and sheath 70 materials may be of different colors, if desired. As further seen in Figures 2 and 4, handle 30 is much shorter than the elongated blade 20, and the width of the blade 20 is substantially constant as it is bordered by the substantially parallel scraper blade edges 40 (Figs. 2 and 6).
